EMPLOYMENT

R&D Engineer: Multimodal imagery and robust methods for the safety and security of autonomous driving systems

LITIS Laboratory, INSA de Rouen

📅 May 2021–April 2022

- Industrial partnerships with Peugeot S.A (Stellantis) and IRT SystemX
- Development of deep-learning modality fusion algorithms for polarimetric imaging
- Adversarial attacks and defenses with provable safety guarantees for deep learning-based autonomous driving systems
- On-road tests of real-time object detection systems in Normandy and Paris

PhD thesis: Auxiliary tasks for the conditioning of Generative Adversarial Networks

LITIS Laboratory, INSA de Rouen

📅 October 2017–April 2021

📍 Supervisors: Pr. G. Gasso, R. Hérault

- Conditioned data generation with Generative Adversarial Networks
- Multi-objective training of Generative Adversarial Networks, integration of domain-specific constraints
- Collaboration with SCK.CEN (Belgium): generative models for underground flow prediction applied to nuclear energy safety
- Image modality transfer and polarimetric imaging with generative models for road-scene object detection in adverse conditions

Research internship: Applied machine learning

LITIS Laboratory, Normandie University

📅 April – October 2017

📍 Supervisor: Pr. T. Paquet

- Industrial partnership with Hamelin SAS for Oxford Notebooks
- Deep learning for offline handwritten text recognition on Android devices with Convolutional LSTMs

Research internship: Computability theory and app development

Laboratoire d'Informatique Fondamentale d'Orléans (University of Orléans)

📅 April–June 2015

📍 Supervisor: Pr. N. Ollinger

- Theoretical works on SMART (Small Minimal Aperiodic Reversible Turing machine) and development of a cross-platform visualisation application of SMART for computability theory researchers in OpenFL

FEATURED PUBLICATIONS

1. Pixel-wise Conditioned Generative Adversarial Networks for Image Synthesis and Completion, **Cyprien Ruffino**, Romain Hérault, Eric Laloy, Gilles Gasso *In Neurocomputing*, 2020
2. Gradient-based deterministic inversion of geophysical data with generative adversarial networks: Is it feasible? Eric Laloy, Niklas Linde, **Cyprien Ruffino**, Romain Hérault, Gilles Gasso, Diedrik Jacques *In Computers and Geosciences*, 2019

EDUCATION

PhD in Machine Learning

📅 2017-2021

📍 INSA de Rouen

BSc and MSc in Software Engineering

📅 2012-2017

📍 Université d'Orléans

Ranked 1st/43

SKILLS

English

European Level C2

French

Native speaker

Python

Java

C/C++

TensorFlow

Keras

Generative models

Deep learning

Computer vision

Numpy

Scikit-learn

Matplotlib

SQL

Linux

Git

Docker

SLURM

SOME PROJECTS

CTCModel

Maintainer

Easy-to-use CTC implementation in Keras

Albert Launcher

Contributor

Keyboard launcher for Linux, in C++/Qt

MISCELLANEOUS

- PhD students' representative, voting member of the LITIS lab council, 2018–2020
- President of the IT students' association, 2015–2016
- Supervisor for 3 master's students' internships, 2019
- System administrator of GPU servers at LITIS, 2018–2021

AND ALSO...

- Hobbyist homebrew developer (PS Vita)
- Amateur lockpicker and bass player
